

Human Impact Project

You and a partner will create a **Prezi** about a problem in the environment that has been created by the human population and its needs. For this presentation you will need to cover the topic thoroughly, including the answers to:

- How humans caused the problem
- How the problem affects the environment (what are the consequences)
- Where the problem is the most significant, especially if it affects the US
- How the consequences can affect humans - directly or indirectly
- How can the problem be fixed
 - Include what individuals can do AND groups
 - Include opposing views if possible
- Who is trying to help fix it (are there any interest/lobbying groups that are working on it)

Also, you will need to include **music** in your presentation and **visuals** whenever possible.

Choices for Human Impact Project

- Acid Rain
- Greenhouse Effect/Global Warming
- Ozone Depletion
- Eutrophication
- Invasive Species (Non-native, Alien, or Foreign species) and Biodiversity
- Nuclear Waste Disposal
- Plastic Pollution in the Ocean
- Deforestation
- Overfishing
- Landfills
- Air Pollution/Air Quality
- Poaching
- Urban Sprawl and Arable Land
- Mining for Coal - how the process affects the environment
- Drilling for Oil - including fracking - and its effect on the environment
- Toxins/Toxic Waste in the Environment (Pesticides, medical waste, war, etc.)
- Flint Water Crisis
