

Nucleus = controls the functions of cell organelles, contains the genetic material (DNA)
 • DNA = found in the nucleus, ~~has~~ is the instructions

mitochondria = makes energy for the cell (mitochondrion)

Cell wall = provides support for PLANT CELLS ONLY, it is very rigid

Cell membrane = allows things in and out of a cell, on BOTH types of cells

Chloroplast = uses the sunlight to make food, what makes plants green, PLANT CELLS ONLY

Cytoplasm = the gel that holds things in place inside the cell
