MicroGravity Home

- Because of pollution here on Earth, your family has just moved to an orbiting space station that has almost zero gravity. Design a home that can exist in microgravity.
- Descriptions should be detailed—how, for example, will you prevent food from floating up off kitchen plates? How will you stay in bed while sleeping?
- Start by brainstorming a list of common activities that are performed in each room of a standard house, then make sure that you take all of those needs into consideration.
