

6. Colon/Rectum/Anus: left over solid waste (feces) gets stored in the colon until it exits out the rectum/anus

Other Important Organs

Liver: stores extra nutrients for the body, produces bile, cleans your blood

Gall Bladder: stores bile which breaks down fat

Pancreas: produces enzymes and digestive juices into the small intestines to help breakdown food; also secretes insulin into the bloodstream to regulate blood sugar

Kidneys: you have 2 that clean/filter your blood to remove waste

- ↳ waste created is called urea
- ↳ build up of salt and other waste here can cause kidney stones to form
