

Condensation

Precipitation

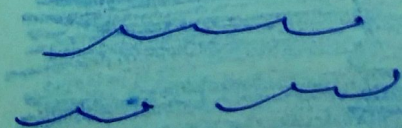

Water
Cycle

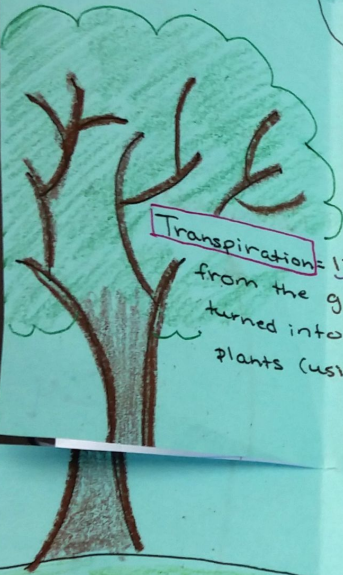

Evaporation /
Transpiration

Collection

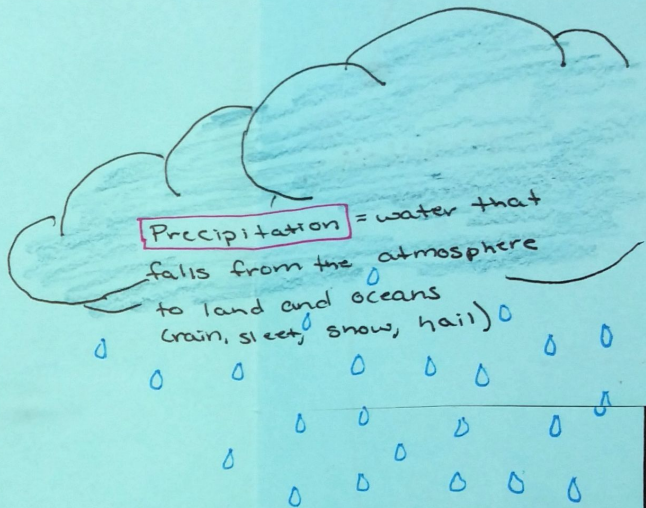

- runoff
- groundwater

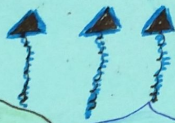

Condensation: change of water from vapor to liquid

Transpiration: liquid water from the ground is turned into vapor by plants (using photosynthesis)

Precipitation = water that falls from the atmosphere to land and oceans (rain, sleet, snow, hail)

Evaporation: water warmed on the ground changes from a liquid to a vapor

Runoff: precipitation that falls on land and then goes into rivers and lakes

Groundwater: water stored between or within rocks
